

Berman Printing Environmental Statement

At Berman Printing, we believe that protecting our environment is both good business and good for the community. We understand that our everyday actions can help preserve our valuable natural resources and protect plant, animal, and human life.

Berman Printing is FSC-certified and uses paper substrates from responsibly harvested and well-managed renewable forests. In addition, we have an ongoing commitment to find safe, clean, environmentally-friendly solutions for our facilities, manufacturing processes, and transportation choices. To measure our ecological footprint, we implemented an Environmental Management System (EMS) to help measure and improve our processes including:

- Energy Utilization and Water Use.
- Source Materials Reduction
- Control and Reduce Waste Streams
- Recycling and Reuse Program
- Report of progress to any and all interested parties

Berman Printing is committed to maintaining compliance with all applicable Environmental, Health, and Safety regulations, including areas not subject to regulation. We review our environmental and sustainability issues on an ongoing basis and have committed ourselves to making continuous improvement through employee training, employee feedback, customer interaction, vendor cooperation and production process evaluation. Our management staff is dedicated to stay up to date on the latest and best options for improved environmental and EHS performance through workshops, trade organization meetings, and sustainability related educational materials.

An important part of this commitment is our willingness to communicate with our employees, vendors, and customers to help them understand the long-term environmental impact of their product choices. We are committed to helping Customers make sustainable material and design choices whenever possible and we encourage you to communicate with us about sustainability so that we may inform and assist you in any way you need. By communicating with our customers, employees, and vendors, we hope to spread this commitment to the rest of our community, our industry, and our planet.

Bill Pearson, President
